

Aero Days

Have you ever wondered how planes fly? Are there highways in the sky? What is the largest aircraft in the world? How are planes tested and what are they tested for before they fly?

You will find the answers to all these questions and many more during the Fly Higher Aero Days. Find out what scientists and the most relevant companies in the aeronautics world have to tell you about this world. Find out why a plane flies and enjoy all the activities planned during the Aero Days. There will be competitions and prizes for all!

Fasten your seat belts and enjoy the flight!

Competitions

Take part in the competitions organised for schoolchildren all over Europe.

- Drawing competition – Draw your best picture of aerospace/aviation-related topics: space, astronauts, pilots, dream planes...
- Photography competition: Send us your best photograph of an aerospace-related theme
- Essay competition
- AeroTrivial

Prizes will be awarded to the most original submissions, to those that show the best aviation-related topic and to those that give the best portrayal of women in aeronautics. Furthermore, if you win you will get your prize and both you and your school will be recognized in the Fly Higher website (<http://www.flyhigher.eu>). Recognition of your achievement will be mentioned in the final conference of the Fly Higher project.

On top of that....

If you have always wanted to know how an airport works or how a plane is built, get in touch with your teacher and talk about it with your classmates. The Fly Higher team could take you and your class on a school trip to find out more and we guarantee you will have a great time learning about these topics!

flyhigher

Welcome to the Fly Higher Project!

The Fly Higher project, funded by the European Commission, aims to attract, motivate and encourage young Europeans to embrace Aeronautics by raising their interest about future career paths in this field and by fostering a close, open, informal dialogue and sustained interactions and networking activities between the aeronautics research community, industry and the scholar community.
